## CANADIAN 24-HOUR MOVEMENT GUIDELINES FOR ADULTS AGED 18-64 YEARS:

An Integration of Physical Activity, Sedentary Behaviour, and Sleep

## PREAMBLE

This document is intended for use by policy makers, health professionals, and researchers, and it may be useful to interested members of the public.

These 24-Hour Movement Guidelines are relevant to adults (aged 18-64 years), irrespective of gender, cultural background, or socio-economic status. These Guidelines may not be appropriate for adults aged 18-64 years who are pregnant or persons living with a disability or a medical condition; these individuals should consider consulting the *Get Active Questionnaire*, disability/condition-specific recommendations, or a health professional for guidance.

Adults aged 18-64 years should participate in a range of physical activities (e.g., weight bearing/non-weight bearing, sport and recreation) in a variety of environments (e.g., home/work/community; indoors/outdoors; land/water) and contexts (e.g., leisure, transportation, occupation, household) across all seasons. Adults aged 18-64 years should limit long periods of sedentary behaviours and should practice healthy sleep hygiene (routines, behaviours, and environments conducive to sleeping well).

Following the 24-Hour Movement Guidelines is associated with these health benefits:

- a lower risk of mortality, cardiovascular disease, hypertension, type 2 diabetes, several cancers, anxiety, depression, dementia, weight gain, adverse blood lipid profile; and
- improved bone health, cognition, quality of life and physical function.

The benefits of following these Guidelines far exceed potential harms. Following these Guidelines may be challenging at times; progressing towards any of the Guideline targets will result in some health benefits.

These 24-Hour Movement Guidelines were informed by the best available evidence, expert consensus, stakeholder consultation, and consideration of values and preferences, applicability, feasibility, and equity. A glossary and more details on the Guidelines, the background research, their interpretation, guidance on how to achieve them, and recommendations for further research and surveillance are available at https://csep.ca/guidelines.

For health benefits, adults aged 18-64 years should be physically active each day, minimize sedentary behaviour, and achieve sufficient sleep.

## A healthy 24 hours includes:

## PHYSICAL ACTIVITY SLEEP SEDENTARY BEHAVIOUR Performing a variety of types and Getting 7 to 9 hours of Limiting sedentary intensities of physical activity, good-quality sleep on time to 8 hours or which includes: a regular basis, with less, which includes: consistent bed and No more than 3 hours of wake-up times recreational screen time Moderate to vigorous aerobic physical activities such that Breaking up long periods of there is an accumulation of at sitting as often as possible least 150 minutes per week Muscle strengthening activities using major muscle groups at least twice a week Several hours of light physical activities, including standing Ċ

Replacing sedentary behaviour with additional physical activity and trading light physical activity for more moderate to vigorous physical activity, while preserving sufficient sleep, can provide greater health benefits.

Progressing towards any of these targets will result in some health benefits.
